PRESS RELEASE

February 18th 2015

Valleyfield College shares a pleasant experience

Montreal, QC, February 18th, 2015 - The Valleyfield College had the opportunity to use MaestroVision technology for the recording of a classroom project.

A teacher in inhalotherapy, Isabelle Roy used the course capture server and the video library system, and shared her impressions with us: "I realized how friendly and easy the software is to use. The user interface allows you to watch student's video presentations along with the visual explanations simultaneously, making it easier to follow and understand the information presented."

After sharing her experience with her colleagues, they all realized that the applications for this technology were endless. The teachers from the Valleyfield College confirm that this is an efficient solution to record lectures and in particular for activities for flipped classroom.

"MaestroVision definitely has an interesting tool to integrate video in presentations. In the teaching world we are heading towards incorporating information and communication technologies! Thank you for this discovery...»" concluded Isabelle.

About MaestroVision

Founded and Incorporated in 1998, MaestroVision is a manufacturer of recording technology and library management system targeted to the Educational, Municipal Government and Law Enforcement markets. The company also provides Automation System, Video Servers and Asset Management Systems for the broadcast industry.
